Master note: I have a feature called Split View, which shows me two pdf side by side. Now, all my features should extend to that feature also, need to ensure that. I mean, in Split View also, all the improvements, changes should work, not in single page view mode only. Need to ensure that.

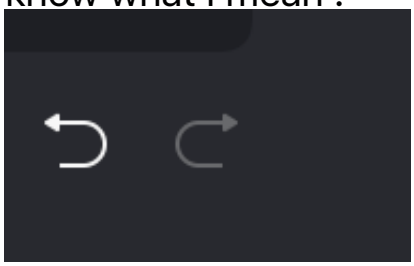

Discrepancies to improve.
1. When I open the home and pin some tools, it shows pinned tools, but the pinned tools icons and text does not align , need to fix that. It seems the text is slightly upper.

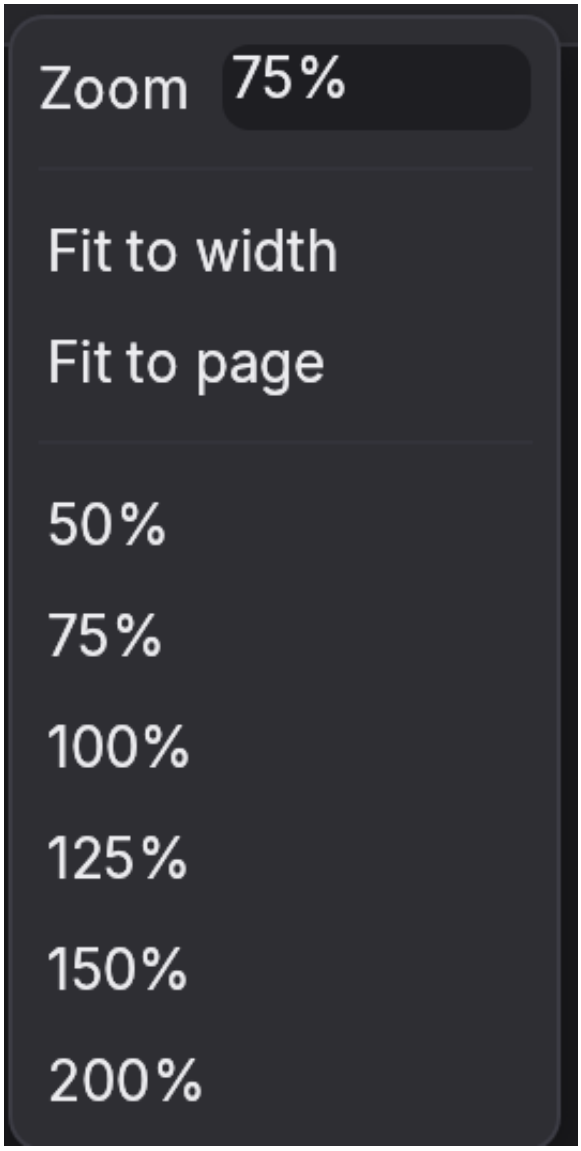

2.This annotation toolbar should have its position configurable , like now its in top, may be side, left or right or bottom, user preference. And also inside all the tools should work flawlessly.

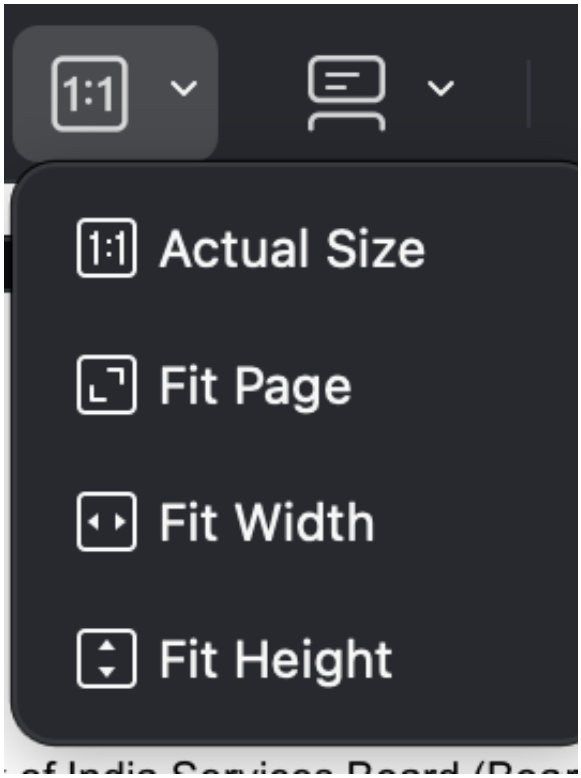

3. I need these type of two icon somewhere , where I did an annotation or mark, I should be able to go backwards and forwards on the changes, you know what I mean .

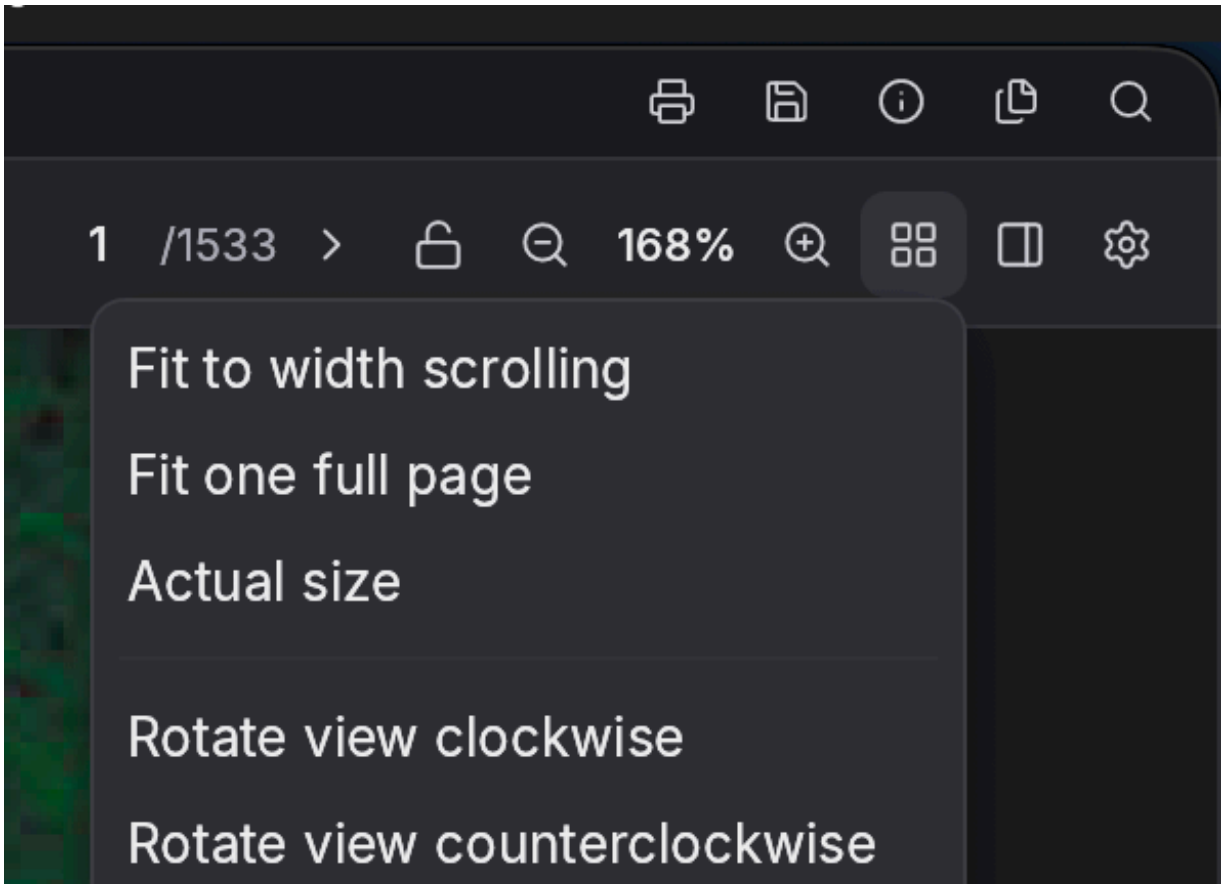

4. In zoom section, I only have fit to width and fit to page, wanna add these more two also.

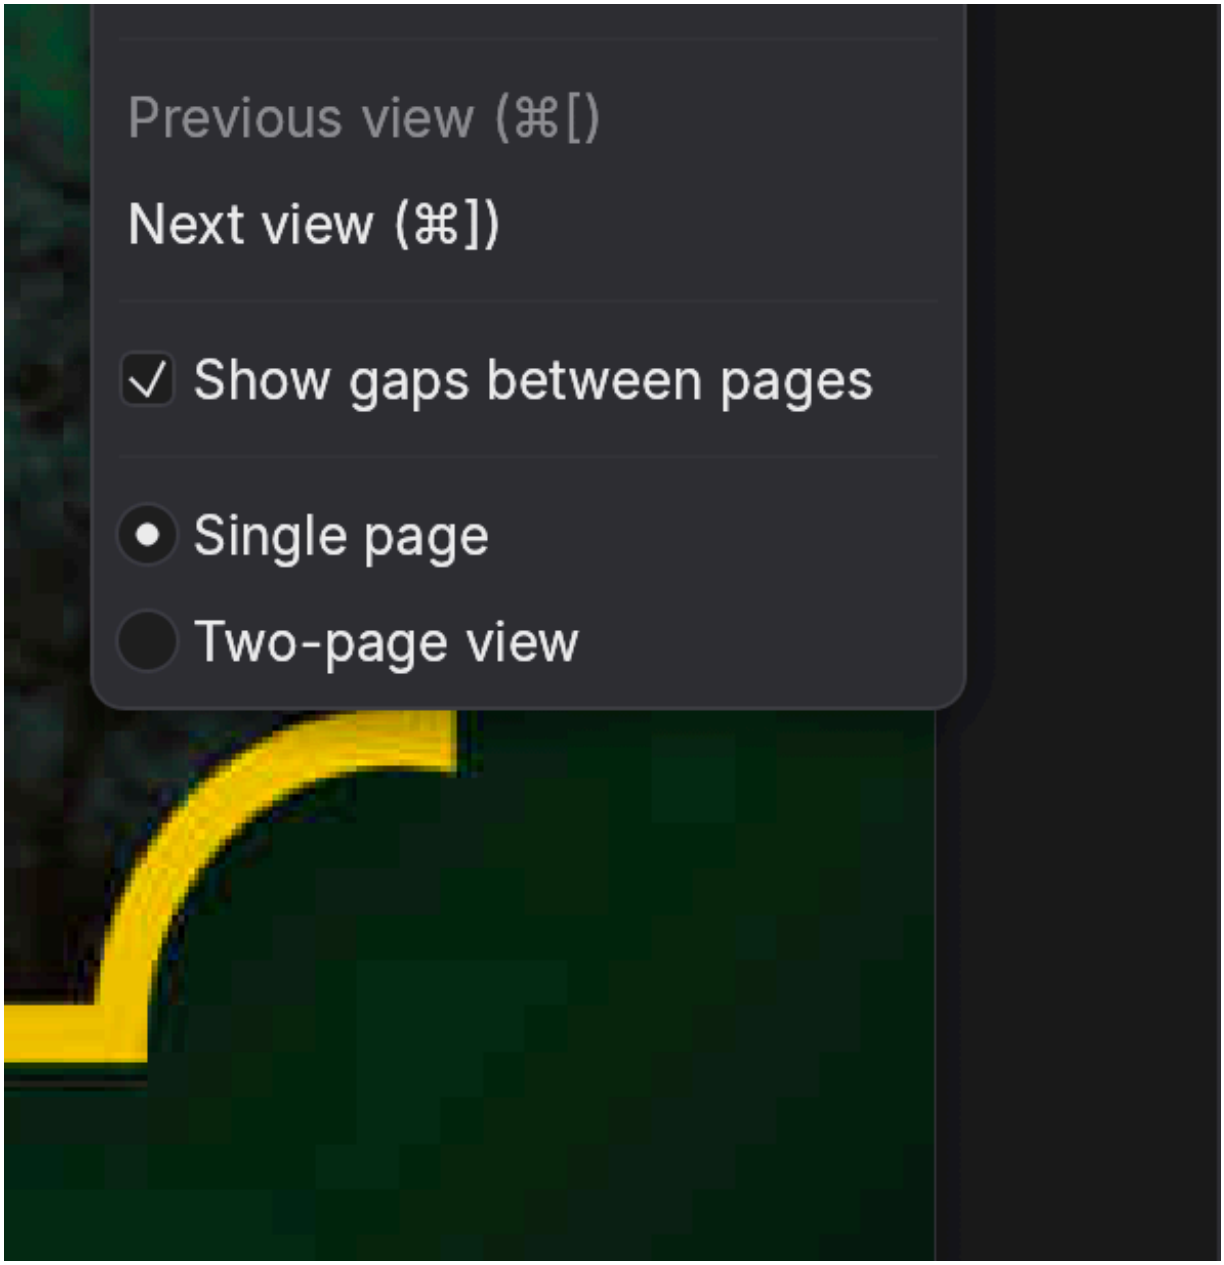

This is my competition product .upper image.

wait I might have the feature, but not in same place, they should be in same place in zoom section at least these 4 options like actual size, fit page, fit width, fit height. As in second image from product of my competitor, the preconfigured zoom percentage and others to be there below.
I might have the feature from below screenshot.

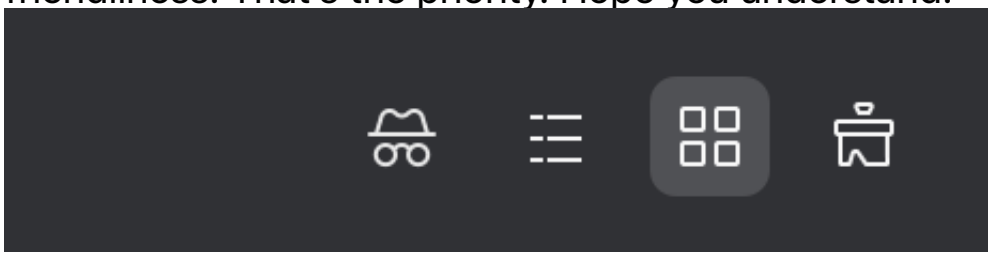

As I was saying from here you can see when I click the command like icon two things happening , one zoom related like fit to width and all, other view related, now zoom related things should go in zoom section, as I explained before and these, view related like single page or double page these should stay here.
Options should extend single page view/ single page scrolling/ double page view / double page scrolling/ separate cover page.

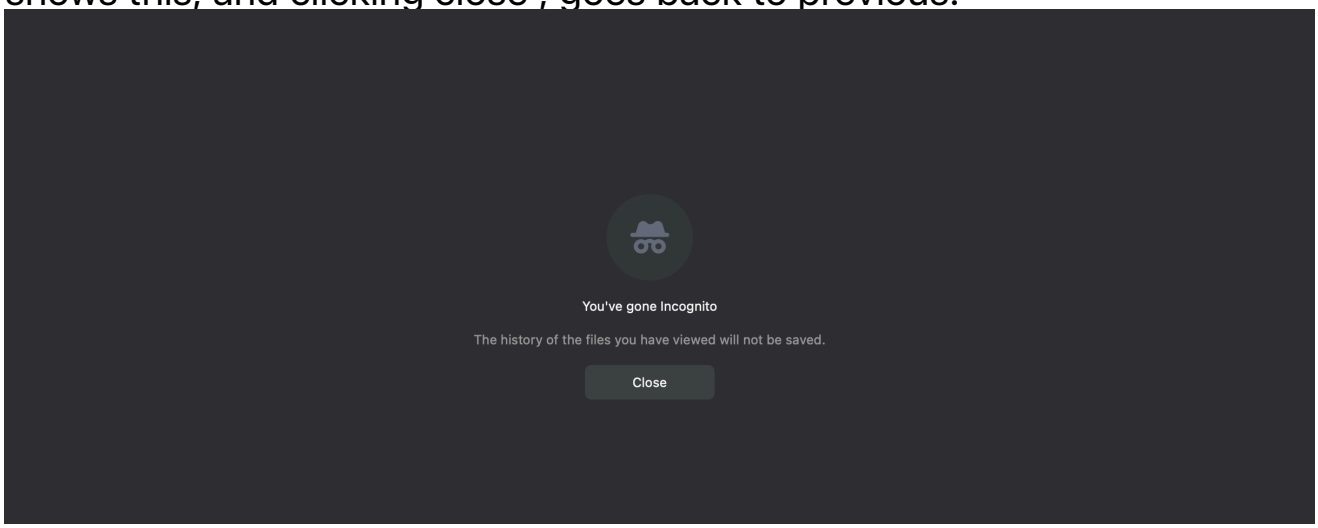

6. In recent and pinned folders, wherever user pinning and saving something appears, there should be few more features like below this image.
Icons are incognito/ list view/grid view/ clear.

Keep in mind all the features are from here are illustrative purposes from

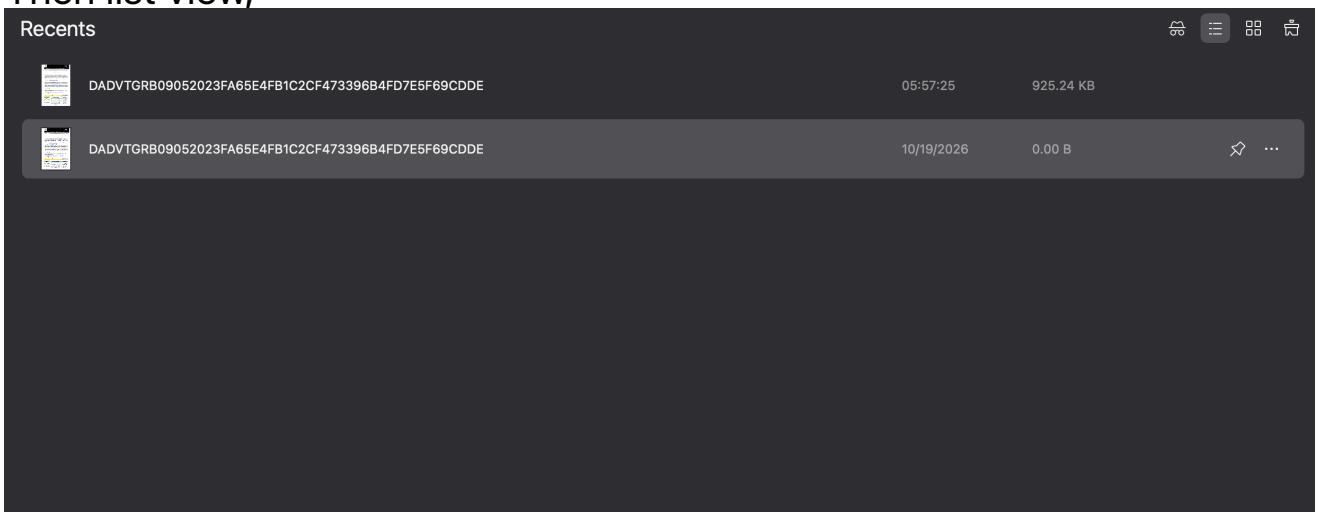

my imagination. Do not implement it as it is, they might look same with some other product or some of my competitor of mine. Saying that, you should not make the features hard for users, first thing is always the user friendliness. That’s the priority. Hope you understand.

what each thing does, is below, there,
Incognito mode replaces all history both in folders and recent items, shows this, and clicking close , goes back to previous.

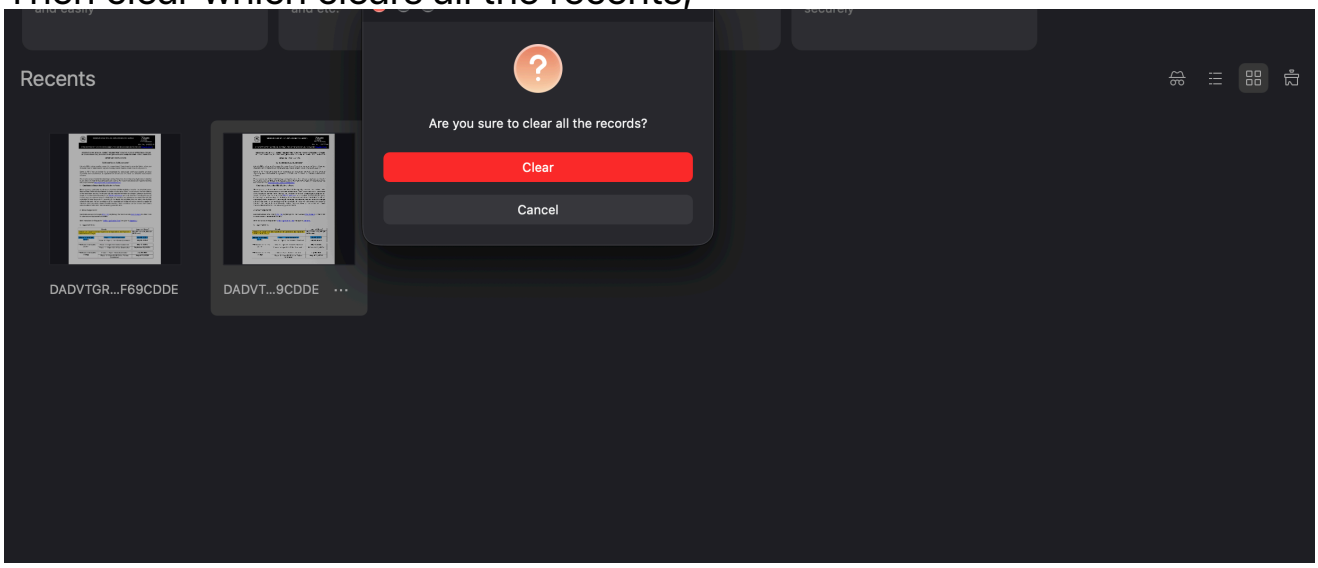

Then list view,

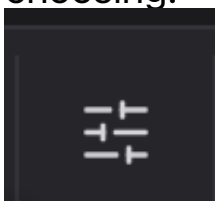

Then grid view

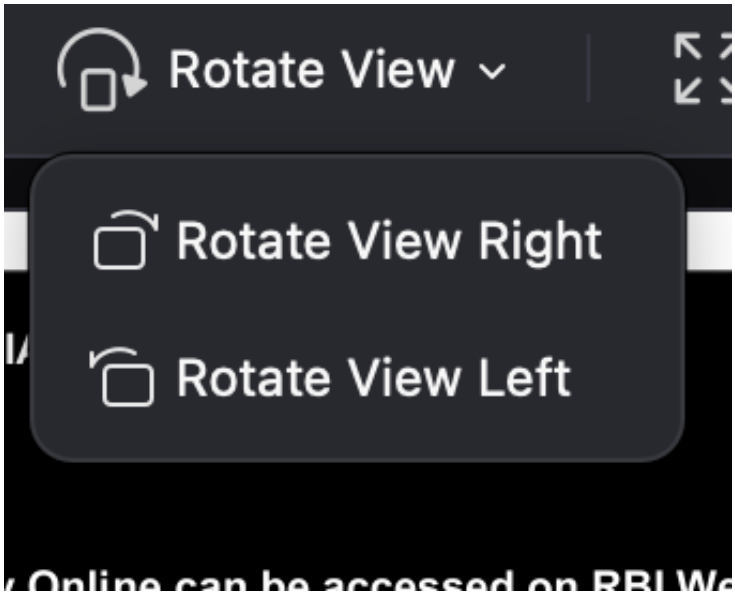

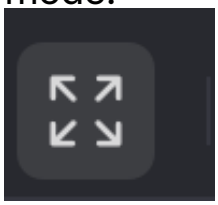

Then clear which clears all the recents,

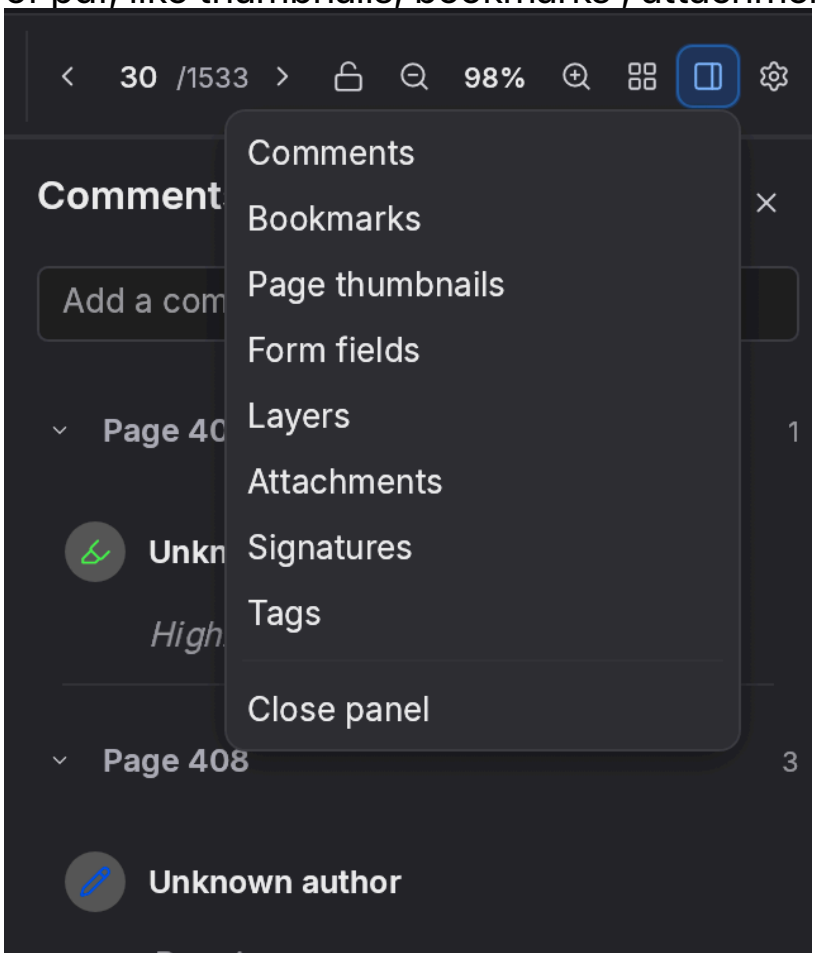

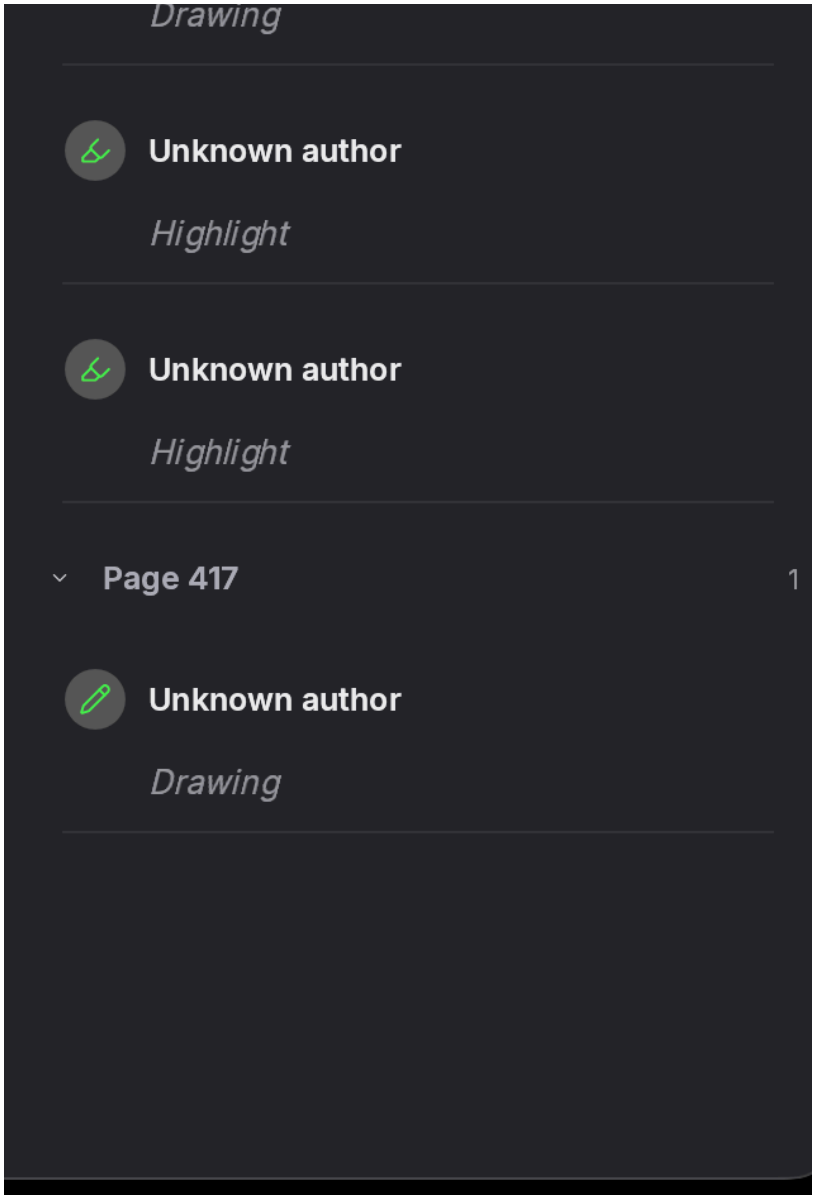

And see , here for illustrative purposes only pdfs pinning are there, I have pinning for tools , folders and pdfs, can it be extended to those also, explore if yes then do that.

1. In annotation bar there should be an option to rotate it, single icon which can be added from , annotation row customisable tool selection, which rotates clockwise or anticlockwise like this, I already have the feature. Just need to put it in annotation bar.and customisable to add or not from this icon in annotation bar. It should remember the state it was in, like if I selected anticlockwise first time then it rotates the pages, anticlockwise, the next time I click it, it rotates anticlockwise, unless I change it via the dropdown icon , also only icon in annotation bar , no text. Text may be shown in dropdown choosing.
2. 

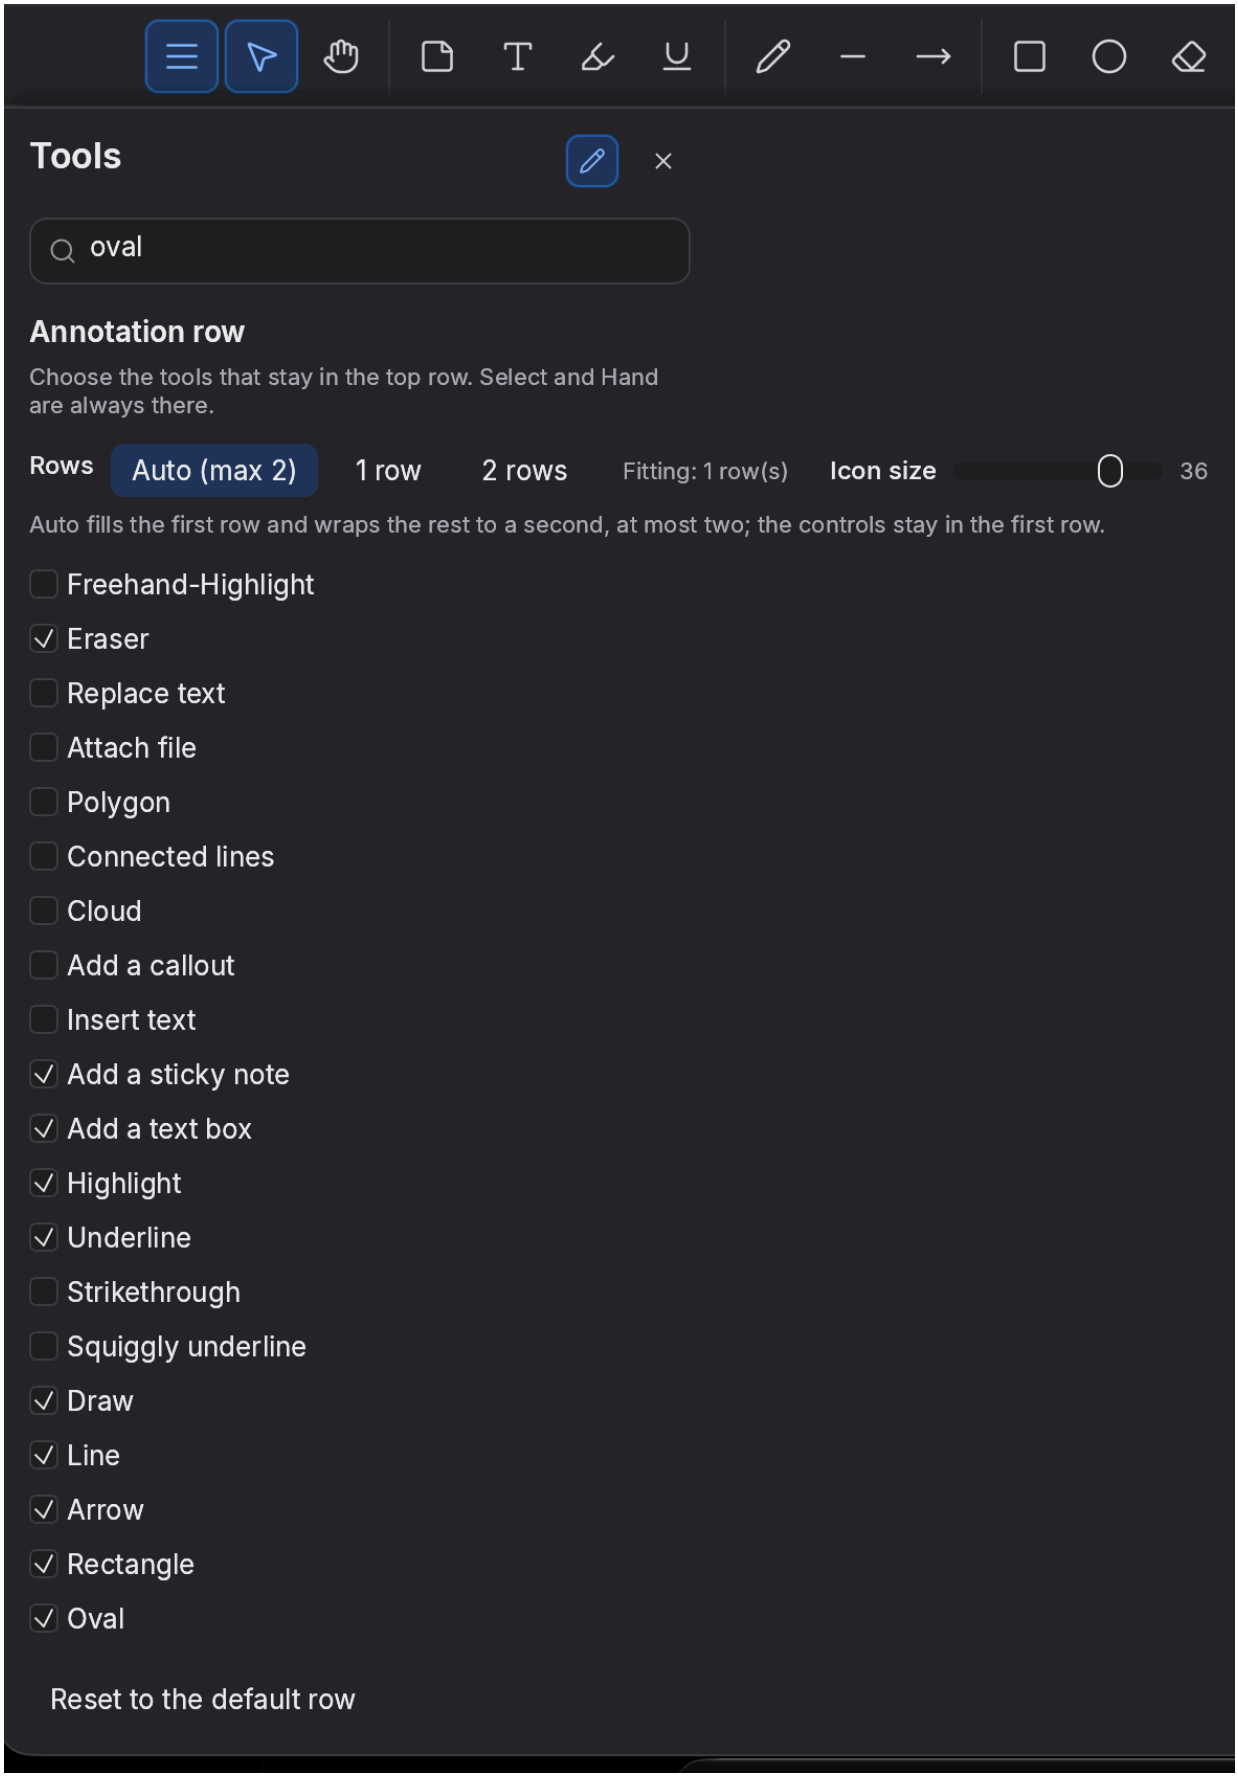

3.
4. I do have something called focus mode, which sometimes does not work, can you fix that.
   also need a icon like this, which maximizes the screen viewing pdf, only pdf, nothing else, you know like some kind of presentation mode.
5. 
6. This icon and its adjoining options opening should be on the left side, because human eye , naturally accustomed to see these in left side of pdf, like thumbnails, bookmarks , attachments etc. right ?

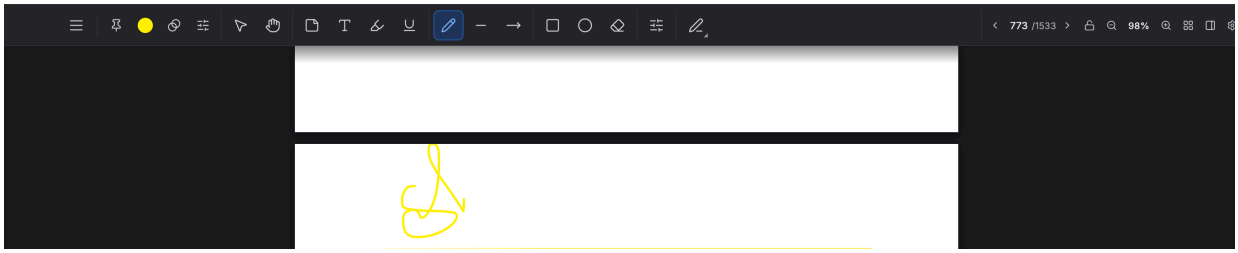

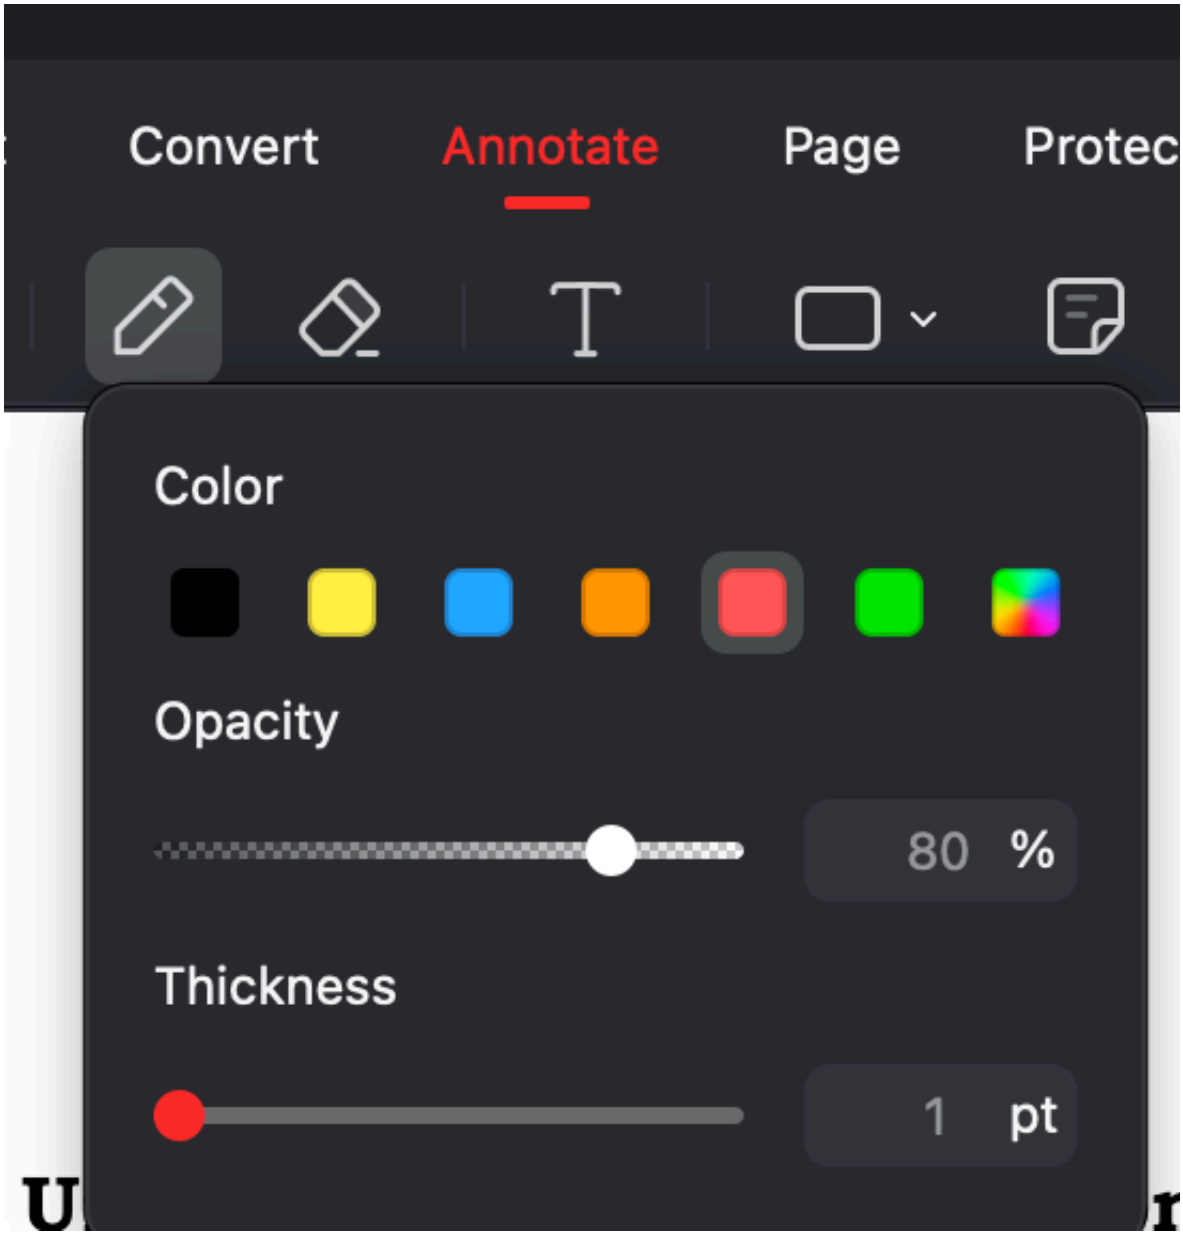

7. 

8. The search box in tools does not work, need to fix that, for example I wrote oval, it should prioritise oval, right ? In annotation toolbar tools search , I am referring.

9. 

10. Like I draw something here, in my app, you see the highlight bar is there, and I can change colour , that’s ok, but what about, customisable opacity and thickness like second image ?

11. 

12. 

For now, these, I know long ask, need to implement it batches. You need to formulate a plan and proceed in it.
